Born 12th September 1953, Ichapur, India

All India Higher Secondary School Examination Certificate, 1969

BSc 1972; MSc 1974, Indian Institute of Technology (IIT), Kharagpur

PhD in Physics 1982, Tata Institute of Fundamental Research (TIFR), Bombay;
Research Associate, Cosmic Rays Group, 1979–84;

Visiting Fellow, International School of Advanced Studies (SISSA), Trieste, 1983

Research Associate, Theory Division, European Organisation for Nuclear Research (CERN), Geneva 1984-85

Visiting Fellow, Department of Astrophysics, University of Oxford, 1985–86

Research Associate, HEP Theory Group, Rutherford Appleton Laboratory (RAL), Chilton, 1987–88

Staff Member, Rudolf Peierls Centre for Theoretical Physics, University of Oxford, since 1990:
Glasstone Fellow, 1990–92; Visiting Scholar, Wolfson College, 1991–93; PPARC Advanced Fellow, 1992–97; Research Fellow, Wolfson College, 1993–97; Departmental Lecturer, 1997–98; Tutor in Physics, Pembroke College, 1997–98; University Lecturer & Fellow of Linacre College, 1998–21; Reader, 2000; Professor, 2006; Head, Particle Theory Group, 2011–19; Emeritus Professor, 2021– ; Emeritus Fellow, Linacre College, 2021–

Address:
Rudolf Peierls Centre for Theoretical Physics, University of Oxford, Parks Road, Oxford OX1 3PU, UK
Tel: +44 1865 273962, Email: subir.sarkar@physics.ox.ac.uk, URL: http://www.physics.ox.ac.uk/our-people/sarkar

Research interests: Particle astrophysics & cosmology; High energy astrophysics; Particle phenomenology

Awards:

- Indian National Science Talent Scholarship, 1969–78
- Glasstone Research Fellowship in Science, University of Oxford, 1990–92
- UK Science & Technology Facilities Council: Rutherford Fellowship, 1992–97; Senior Fellowship, 2006–09
- Niels Bohr Professorship, University of Copenhagen, 2013–18
- IUPAP-TIFR Homi Bhabha Medal & Prize, 2017
- Bruno Rossi Prize of the American Astronomical Society to the IceCube Collaboration, 2021 [shared]
- VAIBHAV Fellowship, Government of India, 2024–27

Academic Service (selected):

- Particle Data Group: Member (Astrophysics & Cosmology section), 2001–
- Editorial Board: SciPost 2017– (Pramana 2013–20; European Physical Journal C 2012–15)
- International Center for Theoretical Physics Asia-Pacific (ICTP-AP), Beijing: Scientific Council, 2019–
- IUPAP: Commission C4, AstroParticle Physics, 2021– (Working Group 10 (ApPIC), 2014–21)
- Gruber Cosmology Prize: Advisory Board, 2014–20
- European Centre for Astro Particle Theory (EuCAPT): Founder Member & Steering Committee, 2019–20
- Astroparticle Physics European Coordination (ApPEC): Programme Review Committee, 2005–09; Science Advisory Committee, 2009–12
- Astroparticle Physics European Research Area Network (ASPERA): Working Groups, 2006–12
- ASTRONET: Science Vision Working Group (Panel A), 2006–08
- Helmholtz Alliance on Astroparticle Physics: International Advisory Board, 2012–17
- Cherenkov Telescope Array: Requirements Review Panel, 2012; Review of 'Key Science Projects', 2014
- KM3NeT: Scientific & Technical Advisory Committee, 2013–20
- Danish Council for Independent Research (FNU): Peer Review Panel — Physics and Astronomy, 2010–12

Subir Sarkar has made key contributions at the interface between fundamental physics and cosmology. He pioneered using the early universe as a laboratory for new physics, setting constraints on new particles from considerations of their effects on primordial nucleosynthesis and relic radiation backgrounds [8, 9, 21, 23, 33]. He devised novel probes of a variety of dark matter candidates [43, 70, 90] and motivated dwarf spheroidal galaxies as optimal targets to search for their annihilation signal [47]. He has proposed and investigated new ideas in cosmic ray and high energy astrophysics [6, 68, 73, 80]. His calculation [81] of deep inelastic scattering of high energy neutrinos is used to analyse data from neutrino telescopes such as *IceCube*. Although a theorist, he also participates in experiments, at both accelerators [148, 149] and using high intensity lasers [450, 455]. He noted that energy-dependent time lags of cosmic γ-ray bursts can probe violations of Lorentz invariance at the Planck scale, thereby launching quantum gravity phenomenology [30]. He has critically questioned the evidence for dark energy [96, 106], and he has found a significant violation of large-scale isotropy [109, 112], the foundational assumption of the standard cosmological model.

Cosmic Rays & High Energy Astrophysics: Sarkar began his research career in experimental cosmic ray physics using plastic track detectors flown on balloons and on *Skylab* [3]. He showed that heavy nuclei in low energy cosmic rays are not fully ionised, implying a Solar System origin [1, 2], and he designed an experiment *Anuradha*, flown later on *Spacelab III*, to study this phenomenon further.

Sarkar then turned to theoretical investigations in high energy astrophysics. By combining radio, X-ray and γ-ray data on the young supernova remnant (SNR) Cassiopeia A, he demonstrated [4] that its magnetic field has been amplified over the compressed interstellar field. He showed that 2$^{\rm nd}$-order Fermi acceleration by plasma turbulence generated as the supernova blast wave is decelerated yields the observed (convex) power-law electron spectrum, and explains the rapid rise in synchrotron luminosity, accompanied by spectral flattening, of young SNRs entering the Sedov-Taylor phase [6].

Sarkar now participates in experiments testing theories of particle acceleration & magnetic field generation using petawatt lasers to simulate astrophysical conditions in the laboratory [105, 451]. Highlights include showing that thermal particles can be accelerated to relativistic energies by the two-stream instability [450], and measurement of the cosmic ray diffusion rate in a turbulent plasma [453], as well as demonstration of suppressed heat conduction in weakly collisional plasmas such as in galaxy clusters [455]. A recent breakthrough is the creation of a relativistic pair-plasma beam using the CERN Super Proton Synchrotron [454], to probe the physics of astrophysical jets from black holes such as in γ-ray bursts [456].

Sarkar noted [5] that old SNRs that have expanded to large sizes in their radiative phase can largely account for the galactic 'diffuse' synchrotron radio emission, thus reconciling the magnetic field values inferred from Faraday rotation with the higher values inferred from the synchrotron luminosity. The closest of these stand out as the 'radio loops' which extend to high galactic latitudes and Sarkar demonstrated [87] that the angular power spectrum of the Galactic emission is well matched on degree scales by the contribution from such old SNRs. He showed [92, 99] that the nearest of these, Loop I, is visible in 'foreground-cleaned' maps of the cosmic microwave background (CMB), with its blackbody-like emission possibly arising from magnetised dust grains — a previously unrecognised foreground for the 'B-mode' polarisation signal due to primordial gravitational waves, which is sought as definitive evidence for inflation.

A nearby SNR may also be responsible for the e^+ excess in cosmic rays seen by the *PAMELA* satellite and confirmed by the *AMS-02* experiment on the International Space Station, which has been widely speculated to be due to dark matter (DM) annihilation. Sarkar explored the possibility that secondary e^+ created by protons accelerated by the shock wave of the SNR will themselves be further accelerated and naturally acquire a harder spectrum than the primary electrons [67]. By fitting to the $e^- + e^+$ spectrum measured by the *Fermi* satellite, the most plausible SNR source configurations can be picked out through Monte Carlo simulations [68]. Other secondary-to-primary ratios e.g. $\bar{p}/p$ should also then flatten with energy; following invited discussions with the *AMS-02* collaboration, this prediction has been refined [91, 111] to pin down this irreducible astrophysical background to signals of new physics e.g. DM annihilation or decay.

Another context in which stochastic acceleration of electrons by plasma turbulence is important is the γ-ray emission observed from the 'Fermi bubbles' — the giant bi-lobar structure discovered in the *Fermi* satellite map of the Galactic Centre region. Sarkar showed [80] that inverse-Compton scattering of starlight and CMB photons by relativistic electrons fits the spectrum and morphology of the bubbles well, and that the electrons can be accelerated on the necessary time scale by plasma turbulence behind the shocks.

Sarkar was a member of the *Pierre Auger Observatory* when it detected the suppression of the ultra-high energy (UHE) cosmic ray flux [156, 164] which may be due to propagation effects or inherent to the cosmic accelerators. He is also a member of *IceCube* which made the breakthrough observation of UHE cosmic neutrinos [248, 256, 263, 295] and has identified a flaring blazar [322, 324] and a Seyfert galaxy [391] as sources. His main contribution to these experiments is in providing theoretical inputs; for example searches for ultrahigh energy neutrinos require knowledge of their deep inelastic scattering cross-section which he computed using parton distribution functions measured at colliders [61, 81]. A key science target is the 'cosmogenic' neutrino flux which Sarkar constrained by analysing the intergalactic propagation of UHE cosmic ray protons [66] and imposing the limit from *Fermi* on the concomitant γ-ray background [73]. Motivated by the observation that the chemical composition is getting heavier at the highest energies [163], Sarkar showed by pioneering studies of the intergalactic propagation of UHE heavy nuclei [57, 63] that the cosmogenic neutrino flux is then substantially reduced [50, 60] — consistent with limits set subsequently [154, 158, 211, 321]. Sarkar has also joined the *Cherenkov Telescope Array* collaboration and participates in defining its science programme [437, 438, 478], especially searches for new physics [441, 442].

Particle Physics & the Early Universe: Sarkar has developed and refined the constraints on fundamental physics from cosmology and astrophysics. All particles, known or as yet undiscovered, would have been created in the early universe, hence analysis of their possible effects on the CMB and the light element abundances from Big Bang nucleosynthesis (BBN) enables stringent constraints to be derived on their properties. The production and interactions of particles can also have observable effects in astrophysical objects such as the Sun and supernovae. Such arguments provide useful guidance on physics beyond the Standard $SU(3)_{\rm c} \otimes SU(2)_{\rm L} \otimes U(1)_Y$ Model, as Sarkar described in an influential review [23].

By combining cosmological constraints on an unstable tau neutrino with laboratory bounds on leptonic mixing, Sarkar demonstrated that the ν_τ must be stable against weak decay and hence lighter than $2m_e$ [8]. With the subsequent discovery of large-angle neutrino mixing, stronger mass bounds follow, but these arguments remain relevant to other hypothetical unstable particles e.g. singlet neutrinos or neutralinos [19, 37]. Sarkar was the first to calculate the 'thermalisation redshift' above which an arbitrarily large electromagnetic energy release in the early universe (e.g. from decaying ν_τs) is entirely converted into blackbody radiation by radiative Compton scattering, leaving no (Bose-Einstein) distortion in the Planck spectrum of the CMB [8]. He was also the first to show that any injection of hydrogen-ionising photons during or after recombination would broaden the last scattering surface and noticeably damp the (then just discovered) 'acoustic peaks' in the CMB angular power spectrum [33] — this has proved to be the most stringent constraint on late-time annihilations (or decays) of relic particles, enabling e.g. precision data from *Planck* to rule out such annihilations as the source of the *PAMELA/AMS-02* positron anomaly.

The leptonic mixing bounds used above came from a search for isosinglet neutrinos in the CERN *WA-66* beam dump experiment using the Big European Bubble Chamber (*BEBC*), in which Sarkar was involved [149]. When 'monojet' events in the *UA1* experiment were interpreted as due to a light gluino, he proposed a search using *BEBC* which ruled this out from the absence of anomalous neutral current-like events [148]. Sarkar also extracted a bound on the ν_τ magnetic moment from the absence of forward scattered electrons [15], which he has recast as world-leading constraints on dark photons & milli-charged particles [110, 114].

Sarkar demonstrated that the thermal production of massive gravitinos can be disastrous for the standard cosmology, implying a severe upper bound on the temperature at the start of the radiation dominated era [9]. The most restrictive bound comes from considering the potential overproduction of D and ^{3}He through the photodisintegration of ^{4}He by the radiation cascades triggered by the high energy photons from gravitino decays [13]. This implies that the Universe was never hot enough for the baryon asymmetry to be created by Grand Unification scale processes, so has motivated attempts to generate it at lower temperatures via leptogenesis, which utilises the 'see-saw' mechanism that can give neutrinos a Majorana mass [34].

Sarkar showed that the Next-to-Minimal-Supersymmetric Standard Model (NMSSM) is inconsistent with cosmology [21]; this is because unacceptable domain walls [26] form at electroweak symmetry breaking due to the underlying Z_3 symmetry. Models for the QCD axion too have a domain wall problem when the Peccei-Quinn symmetry breaks after inflation; to solve this requires the Peccei-Quinn scale to be $< 5.4\times10^8$ GeV, thus ruling out e.g. the DFSZ axion with mass below ~ 11 meV, where most experimental searches are in fact focused [115]. Sarkar is now searching at the European XFEL for heavier axions [458].

Sarkar showed that in supergravity-based inflationary models, the Hubble parameter cannot exceed the gravitino mass [20]. Taking non-renormalisable terms in the potential into account, inflation can however occur as low as the electroweak scale and still generate the required amplitude of density perturbations [41]. Moreover, other fields can undergo symmetry breaking phase transitions during inflation, introducing spectral features [28] and non-Gaussianity [69]. Sarkar has searched for such features in the primordial spectrum deconvolved from CMB data [89, 97] and mapped this on to the effective field theory of inflation [107].

Sarkar calculated the error correlation matrix for BBN [31] and highlighted systematic uncertainties in inferring the primordial abundances, which allow an additional light neutrino (or equivalent particle) [35]. Using this he imposed constraints on an additional Z' to which singlet neutrinos are coupled [10], on a 'time-varying cosmological constant' [25], and on the thermal history of the universe after BBN [29].

Sarkar proposed that quantum gravity effects might be detectable by looking for high energy Lorentz invariance violation (LIV) through e.g. energy-dependent arrival time dispersion in cosmologically distant γ-ray bursts [30, 44]. Observations by Cherenkov telescopes and the *Fermi* satellite have however ruled out a LIV term proportional to $E_\gamma^2/M_{\rm Pl}$. Sarkar showed that an even smaller (and theoretically more plausible) term of $\mathcal{O}(E_\gamma^3/M_{\rm Pl}^2)$ can result in decoherence of oscillations of cosmic neutrinos and alter their flavour ratio away from the standard expectation, at a level to which IceCube is sensitive [52, 313, 375, 407].

Dark Matter & Dark Energy: An attractive particle candidate for DM is the lightest supersymmetric particle. Sarkar showed that neutralinos in the NMSSM can be significantly lighter than the weak scale [17]. Alternatively DM may consist of massive metastable particles; the high energy neutrino flux from their decays is detectable in underground experiments and requires such particles to have lifetimes $> 10^{16}$ yr [16]. When ultrahigh energy cosmic rays were detected beyond the expected 'GZK cutoff', he proposed that these arise from the slow decays of such particles clustered in the Galactic halo [32]. Sarkar showed that the observed spectrum is well matched by that expected from QCD fragmentation [43] but that photons should then dominate over nucleons in ultrahigh energy cosmic rays. This prediction was ruled out by subsequent data from the *Pierre Auger Observatory* [150, 153] thus constraining such 'top down' models. These calculations also constrain proposals to interpret the *IceCube* events as due to decaying DM [320].

Using dynamical arguments to infer their DM content, Sarkar noted that dwarf spheroidal galaxies are attractive targets for γ-rays from DM annihilation or decay [47, 79, 94]; this has motivated many searches by atmospheric Cherenkov telescopes like *H.E.S.S*, *MAGIC* and *VERITAS*, and the *Fermi* satellite. However DM may have an asymmetry like baryons and not annihilate — accreted DM would then affect heat transport in the Sun and potentially solve the 'Solar composition problem', as well as perturb Solar neutrino fluxes [70]. Such DM arises in models of new strong dynamics [75, 78] and can couple differently to protons and neutrons [86], thus reconciling conflicting results from direct searches [88]. The limits set on the DM mass and scattering cross-section by such nuclear recoil detectors is sensitive to the assumed DM velocity distribution, so Sarkar developed a halo-independent method for fair comparison of results from different experiments [84]. He reassessed the claim for DM self-interactions from the apparent offset between a gravitationally lensed galaxy and its DM halo in A3827 [95], noting that the required cross-section implies a potentially observable separation between the galaxies and DM in merging clusters [90, 142].

Sarkar demonstrated that possible features in the spectrum of primordial perturbations [51] (which is usually assumed to be a power-law) have an important effect on extraction of cosmological parameters from CMB & large-scale structure data [59, 65] and can, in particular, do away with the need for dark energy [46]. The assumption that the primordial perturbations were gaussian is also challenged by the larger than expected number of merging clusters [93], as well as the anomalously large correlations observed between the CMB and stacked voids [83]. The local bulk flow extends much deeper than is expected in the standard ΛCDM cosmology [76] and this too biases parameter inference [116]. Moreover the cosmic acceleration inferred from the Hubble diagram of Type Ia supernovae has a dipole asymmetry [106], so cannot be due to a Cosmological Constant [143]. Most unexpected of all, in the cosmic rest frame where the CMB is isotropic, the matter distribution as traced by radio sources and quasars is anisotropic at $> 5\sigma$ [109, 112], thus challenging the assumption of the Freidmann-Lemaître-Robertson-Walker metric. To highlight this and other such anomalies, Sarkar organised a Royal Society Discussion Meeting *Challenging the Standard Cosmological Model*, which attracted very wide interest. He has joined the *Rubin-LSST* Dark Energy Science Collaboration to conduct further tests of ΛCDM, and develop a better cosmological model.

Invited Talks at Conferences & Workshops:

1. ICHEP 85: International Conference on High Energy Physics, Bari, Jul 1985
2. ISMD 86: XXVI International Symposium on Multiparticle Dynamics, Seewinkel, Jun 1986 [122]
3. UK HEP Theory X'mas Meeting, Rutherford Appleton Laboratory, Chilton, Dec 1987
4. NATO ASI: *Observational Tests of Cosmological Inflation*, Durham, Dec 1990 [123]
5. UK HEP Theory X'mas Meeting, Rutherford Appleton Laboratory, Chilton, Dec 1990
6. UK HEP Cosener's House Forum: *Dark Matter*, Abingdon, Jun 1991
7. UK Institute of Physics Discussion Meeting: *Dark Matter*, London, Jun 1991
8. NORDIC meeting on Theoretical Physics, Copenhagen, Aug 1993
9. XI DAE Symposium on High Energy Physics, Shantiniketan, Jan 1994
10. UK HEP Forum: *New Horizons in Astroparticle Physics*, Abingdon, Feb 1994
11. UK HEP Forum: *Particle Cosmology*, Abingdon, Jun 1994
12. Royal Astronomical Society Discussion Meeting: *Neutron Stars*, London, Jan 1995
13. UK National Astronomy Week, Cardiff, Apr 1995
14. Inaugural Conference of the Asia-Pacific Centre for Theoretical Physics, Seoul, Sep 1996 [125]
15. WHEPP 96: Fourth Workshop on High Energy Physics Phenomenology, Calcutta, Jan 1996
16. DARK 96: *Dark Matter in Astro- & Particle Physics*, Heidelberg, Sep 1996 [124]
17. WIN 07: XVI Intern. Workshop on Weak Interactions & Neutrinos, Capri, Jun 1997 [126]
18. International Workshop on Synthesis of Nuclei in the Early Universe, Trento, Jun 1997
19. ICTP Workshop: *Highlights in Astroparticle Physics*, Trieste, Nov 1997
20. UK Institute of Physics Annual Conference on High Energy Physics, Manchester, Apr 1998
21. CAPP-98: International Workshop on Cosmology & Particle Physics, Geneva, Jun 1998
22. DARK 98: *Dark Matter in Astro- & Particle Physics*, Heidelberg, Jul 1998
23. NOW 98: EPS Neutrino Oscillation Workshop, Amsterdam, Sep 1998 [471]
24. ICTP Workshop: *The Physics of Relic Neutrinos*, Trieste, Sep 1998
25. DESY Theory Workshop: *Directions Beyond the Standard Model*, Hamburg, Oct 1998
26. JENAM'99: Joint European & National Astronomical Meeting, Toulouse, Sep 1999
27. COSMO-99: *Particle Physics & the Early Universe*, Trieste, Oct 1999 [129]
28. Landelijk Seminarium, NIKHEF, Amsterdam, Dec 1999
29. Annual UK HEP Theory Meeting, Rutherford Appleton Laboratory, Chilton, Dec 1999
30. Nordic Workshop: *Neutrino physics & Cosmology*, Copenhagen, Apr 2000
31. Summer Institute: *Dark Matter & Supersymmetry*, Gran Sasso, Jul 2000
32. XIII Recontres des Blois: *Frontiers of the Universe*, Blois, Jun 2001 [135]

33. International Workshop: *The Physics of Extra Dimensions*, Paris, Jun 2001
34. International Conference: *Deuterium in the Universe*, Meudon, Jun 2001
35. ICHEP 01: Intern. Europhyics Conf. on High Energy Physics, Budapest, Jul 2001 [132]
36. COSMO-01: *ParticlePhysics & the Early Universe*, Rovaniemi, Sep 2001 [133]
37. IUCAA Workshop: *Interface of Gravitational & Quantum Realms*, Pune, Dec 2001 [44]
38. NORDITA Meeting on Astroparticle Physics & Cosmology, Copenhagen, Mar 2002
39. Planck 01: International Conference on Supersymmetry & Brane Worlds, Kazimierz, May 2002
40. Workshop: *Cosmoseismology& Entropy Perturbations*, Portsmouth, Jun 2002
41. International Conference on String/M-theory Phenomenology, Oxford, Jul 2002
42. International Workshop on Branes, Gravity, ...: New Interfaces, London, Sep 2002
43. HEP 2003: Workshop on High Energy Physics and Cosmology, Athens, Apr 2003
44. Planck 03: *From the Planck Scale to the Electroweak Scale*, Madrid, May 2003
45. CAPP-2003: International Workshop on Cosmology & Particle Physics, Geneva, Jun 2003
46. Claude Itzykson meeting: *Which Model(s) for the Early Universe?*, Saclay, Jun 2003
47. Eötvš Graduate Course and Workshop in Physics, Balatonfüred, Jun 2003 [136]
48. ISMD 03: XXXIII International Symposium on Multiparticle Dynamics, Krakow, Sep 2003 [134]
49. International Workshop on Astroparticle & High Energy Physics, Valencia, Oct 2003
50. 315th WE-Heraeus-Seminar: *Dark Matter and Dark Energy*, Bad Honnef, Dec 2003
51. Institute of Physics UK Particle Physics Conference 2004, Birmingham, Apr 2004
52. Planck 04: *From the Planck Scale to the Electroweak Scale*, Bad Honnef, May 2004
53. International Conference: *The density Perturbation in the Universe*, Athens, Jun 2004 [137]
54. *Terrestrial and Cosmic Neutrinos, leptogenesis and Cosmology*, Benasque, Jul 2004
55. ISVHECRI 04: Intern. Symp. on Very High Energy Cosmic Ray Interactions, Pylos, Sep 2004
56. UK High Energy Physics Forum: *Cosmic Particles*, Abingdon, Feb 2005
57. SNS Pisa-UCLA Workshop: *Cosmic Connections*, La Magia, Apr 2005
58. Montpellier-Toulose meeting: *Dark Energies, Dark matters*, Paris, Apr 2005
59. PASCOS'05: International Conference on Particles, Strings & Cosmology, Gyeongju, Jun 2005
60. COSMO 05: Intern. Workshop on Particle Physics & the Early Universe, Bonn, Sep 2005
61. European Astroparticle Physics Town Meeting, Munich, Nov 2005
62. International Conference: *From Strings to Cosmic Web*, Groningen, Dec 2005
63. Cosmology 2005: *A Reality Check*, Copenhagen, Dec 2005
64. XI IFT-UAM/CSIC Christmas Workshop on Particle Physics, Madrid, Dec 2005
65. Workshop on High Energy Physics Phenomenology, Bhubaneshwar, Jan 2006 [472]

66. Sixth National Astroparticle Symposium, Amsterdam, Feb 2006
67. HEP2006: Recent Developments in High Energy Physics & Cosmology, Ioannina, Apr 2006
68. ToK Workshop on Particle Physics & Cosmology, Warsaw, May 2006
69. Institute of Physics UK, Astroparticle Group meeting, Sheffield, May 2006
70. International Workshop: *The Dark Side of the Universe*, Madrid, Jun 2006
71. International Conference: *Quantum . . . Gravity and Cosmology*, Barcelona, Jul 2006
72. DESY Theory Workshop: *The Dark Universe*, Hamburg, Sep 2006
73. *Outstanding questions for the standard cosmological model*, London, Mar 2007
74. *From IRAS to Herschel/Planck*, London, Jul 2007
75. ASPERA workshop for the Astroparticle Roadmap, Phase II, Paris, Jul 2007
76. COSMO 07: Intern. Workshop on Particle Physics & the Early Universe, Falmer, Aug 2007
77. TRR-33 Workshop: *The Dark Universe*, Bad Honnef, Oct 2007
78. AMT Workshop: *Questions for the Universe*, Toulouse, Nov 2007

125. RAS Specialist Discussion Meeting, *Exploring the Non-Thermal Universe*, London, Nov 2011
126. HEAP 2011: *Gamma-ray universe: Fermi to CTA*, Tsukuba, Nov 2011
127. *OPERA versus Maxwell and Einstein' event*, King's College London, Nov 2011
128. CTA Consortium Meeting, Univ Complutense Madrid, Nov 2011
129. *Amazing Particles & Light: Horizons in Accelerators and Enabled Sciences*, Bangalore, Dec 2011
130. Advances in Astroparticle Physics & Cosmology, Darjeeling, Mar 2012
131. National Symposium on Particles, Detectors and Instrumentation, Mumbai, Mar 2012

132. HEP2012: *Recent Developments in High Energy Physics and Cosmology*, Ioannina, Apr 2012
133. Planck 2012: *From the Planck Scale to the Electroweak Scale*, Warsaw, May 2012
134. NORDITA Workshop on *Origin of Mass 2012*, Stockholm, Jun 2012
135. *darkattack2012*, Ascona, Jul 2012
136. International Symposium on *Very High Energy Cosmic Ray Interactions*, Berlin, Aug 2012
137. IAU XXVIII General Assembly: *The Highest-Energy Gamma-ray Universe*, Beijing, Aug 2012
138. Workshop on *Physics of De Sitter Space-time*, Hannover, Sep 2012
139. John Ellis Day, *Outlook in Particle Physics*, London, Oct 2012
140. IMAPP Jubilee Colloquium, Nijmegen, Nov 2012
141. *Partikeldagarna*, Stockholm, Nov 2012
142. *ASPERA ad futurum*, Brussels, Nov 2012
143. V F Hess Centenary Symposium, Mumbai, Dec 2012
144. *Time & Matter*, Venice, Mar 2013
145. Nordic CTA Meeting, Stockholm, Mar 2013
146. 47th ESLAB Symposium: *The Universe as seen by PLANCK*, Noordwijk, Apr 2013
147. Latsis Symposium: *Nature at the Energy Frontier*, Zurich, Jun 2013
148. KSETA Plenary Workshop, Bad Herrenalb, Feb 2014
149. *New Frontiers in Theoretical Physics*, Cortona, May 2014
150. Strategy Workshop on Astroparticle in Switzerland, Geneva, Jun 2014
151. *Frontiers of Fundamental Physics*, Marseille, Jul 2014
152. DISCRETE 2014, London, Dec 2014
153. NuPhys2014, London, Dec 2014
154. LahanasFest, Athens, Jan 2015
155. *Measuring B-mode polarization from Greenland*, Copenhagen, Feb 2015
156. AMS Days at CERN: The Future of Cosmic Ray Physics, Geneva, Apr 2015
157. WylerFest, Zurich, May 2015
158. 5th Iberian Gravitational-Wave Meeting, Barcelona, May 2015
159. Workshop on *Alternative matter & alternative gravity*, Heraklion, May 2015
160. TamavakisFest, Ioannina, May 2015
161. Planck 2015, Ioannina, May 2015
162. *2015: The Spacetime Odyssey Continues*, Stockholm, Jun 2015
163. *Current Themes in High Energy Physics & Cosmology*, Copenhagen, Aug 2015
164. European Nuclear Physics Conference, Groningen, Sep 2015

165. Sixth Quantum Universe Symposium, Groningen, Mar 2016
166. APPEC Town Meeting, Paris, April 2016
167. *Axion-like Particles: Theory & Experiment*, Durham, April 2016
168. *CMB Spectral Distortions*, Bangalore, Jul 2016
169. *Relativistic astrophysics & gravitational waves*, Copenhagen, Jul 2016
170. Current Themes in High Energy Physics & Cosmology, Copenhagen, Aug 2016
171. *LHC Days in Split*, Split, Sep 2016
172. Danish Astroparticle Physics Meeting, Odense, Oct 2016
173. *Dark matter from aeV to ZeV*, Lumley Castle, Nov 2016
174. Landelijk Seminarium, NIKHEF, Mar 2017
175. DIS 2017, Birmingham, Apr 2017
176. *The future of WIMP dark matter*, Chicheley Hall, May 2017
177. *Messengers: Astroparticles and Gravitational Waves*, Stockholm, Jul 2017
178. *DAVCo: DArk matter, neutrinos and their Connections*, Odense, Sep 2017
179. Galileo Institute Conference: *Collider Physics & the Cosmos*, Florence, Oct 2017
180. *Probing Fundamental Physics with CMB Spectral Distortions*, Geneva, Mar 2018
181. *New Probes for Physics Beyond the Standard Model*, Santa Barbara, Apr 2018
182. *The small-scale structure of cold(?) dark matter*, Santa Barbara, Apr 2018
183. Symposium on Particle, Astroparticle & Cosmology, Tallin, Jun 2018
184. NORDITA Workshop: *Cosmology & Gravitational Physics with Lambda*, Stockholm, Jul 2018
185. *Current themes in High Energy Physics and Cosmology*, Copenhagen, Aug 2018
186. Workshop on The Standard Model & Beyond, Corfu, Sep 2018
187. Hillas Symposium, Heidelberg, Dec 2018
188. XVIII International Workshop on Neutrino Telescopes, Venice, Mar 2019 [talk]
189. International Conference on High-Energy-Density Physics, Oxford, Apr 2019
190. Ninth Quantum Universe Symposium, Groningen, Apr 2019
191. CTA: 1st Science Symposium, Bologna, May 2019
192. ICTP-AP International Conference on Frontiers of Fundamental Physics, Beijing, May 2019
193. 36th International Cosmic Ray Conference, Madison, Jul 2019
194. International Conf. on Fundamental Physics, Hyderabad, Sep 2019
195. 15^{th} Central European Seminar on Particle Physics & Quantum Field Theory, Vienna, Nov 2019
196. Multimessengers, compact objects and fundamental physics, Prague, Dec 2019
197. Chitre Memorial Symposium: Frontiers in Astrophysics & Fluid Dynamics, Mumbai, May 2021

198. Cosmological Frontiers in Fundamental Physics, Paris, May 2021
199. 38th Conf. on Recent Developments in HEP & Cosmology, Thessaloniki, Jun 2021
200. MMAP2022: Advances in Astroparticle Physics and Cosmology, Kolkata, May 2022
201. 24th International Conference: From the Planck Scale to the Electroweak Scale, Paris, Jun 2022
202. XV Intern. Conf. on Interconnections between Particle Phys. & Cosmology, St Louis, Jun 2022
203. 39th Conf. on Recent Developments in HEP & Cosmology, Thessaloniki, Jun 2022
204. XXIX Conf. on Supersymmetry & Unification of Fundamental Interactions, Ioannina, Jun 2022
205. Workshop on the Standard Model and Beyond, Corfu, Sep 2022
206. Challenges to ΛCDM, Thessaloniki, Sep 2022
207. Annual Theory Meeting, Durham, Dec 2022
208. Frontiers in Cosmology, Bangalore, Feb 2023
209. Herbi-Fest, Bonn, Mar 2023
210. Axions across boundaries between Particle Physics, Astrophysics, Cosmology . . . , Florence, Jun 2023
211. XXX Conf. on Supersymmetry & Unification of Fundamental Interactions, Southampton, Jul 2023
212. A.K. Raychaudhuri Centenary Symposium, Kolkata, Aug 2023
213. Cosmology Workshop: A multipolar universe?, Thessaloniki, Sep 2023
214. Forward Physics Facility Theory Workshop, Geneva, Sep 2023
215. The Early Universe: A Window to New Physics, Gainesville, Oct 2023
216. International Symposium on Recent Developments in Relativistic Astrophysics, Gangtok, Dec 2023
217. 7th Forward Physics Facility Meeting, Geneva, Mar 2024
218. Black Holes & Cosmology, Nassau, Mar 2024
219. Athens symposium on Exploring the Universe, Athens, Jun 2024
220. Spontaneous Workshop on Cosmology, Cargese, Sep 2024

Invited Lectures at Schools:

1. ICTP Summer School in High Energy Physics & Cosmology, Trieste, Jul 1985 [121]
2. Scuola Internazionale Superiore Studi Avanzati (SISSA) Graduate School, Trieste, Jul 1986
3. GIFT School in Theoretical Physics, Peniscóla, Aug 1986
4. Adriatic School on High Energy Physics, Split, Jun 1987
5. Centro Fundamental Materia Condensada (CFMC) Graduate School, Lisbon, Mar 1992
6. Spring School in High Energy Physics & Cosmology, Tenerife, May 1992
7. Tata Institute of Fundamental Research (TIFR) Graduate School, Bombay, Aug 1993
8. Indian Institute of Astrophysics (IoA) Graduate School, Bangalore, Dec 1994,
9. BCSPIN/ICTP Summer School in Physics, Kathmandu, May 1997

10. Autumn School on Theoretical Physics, Santiago de Compostela, Sep 1997
11. XIX UK Institute for Theoretical High Energy Physicists, Oxford, Aug 1998
12. Graduiertenkolleg on Cosmology & Statistical Physics, Heidelberg, Nov 1998
13. IPM School on Large-scale structure formation, Kish, Jan 1999 [128]
14. Bruno Pontecorvo School on Elementary Particles, Capri, May 1999
15. Finnish Particle Cosmology School, Kiljavanranta, Aug 1999
16. NATO Advanced Study Institute: Particle Physics & Cosmology, Cascais, Jul 2000 [130]
17. British Universities Summer School in Elementary Particle Physics, Oxford, Sep 2000
18. British Universities Summer School in Elementary Particle Physics, Manchester, Sep 2001
19. International Graduate School in Mathematics & Physics, Bonn, Jan 2002
20. ICTP Summer School on Particle Physics & Cosmology, Trieste, Jul 2002
21. Second Crete School on String Theory, Kolymbari, June 2003
22. Second Aegean School on the Physics of the Early Universe, Syros, Sep 2003
23. CERN Summer Student Programme: *Introduction to Cosmology*, Geneva, Aug 2004
24. Third Aegean School on the Physics of the Early Universe, Chios, Sep 2005
25. CERN Summer Student Programme: *Introduction to Cosmology*, Geneva, Jul 2006
26. Nordic Winter School in Particle Physics & Cosmology, Gausdal, Jan 2007
27. CERN Summer Student Programme: *Introduction to Cosmology*, Geneva, Jul 2007
28. CERN Summer Student Programme: *Introduction to Cosmology*, Geneva, Jul 2008
29. ICTS School: *Cosmology with CMB and LSS*, Pune, Aug 2008
30. ICTS School: *QCD at High Parton Density*, Dona Paula, Sep 2008
31. Les Houches School: *Searching for Dark Matter*, Les Houches, Mar 2009
32. Corfu Summer School: *The Standard Model & Beyond*, Corfu, Sep 2009
33. DPG Physics School: *Astroparticle Physics*, Bad Honnef, Sep 2009
34. Winter School in Astroparticle Physics, Darjeeling, Dec 2009
35. YETI School in Astroparticle Physics, Durham, Jan 2009
36. Taller de Altas Energias: *Astroparticle Physics*, Barcelona, Sep 2010
37. CORSIKA Winter School in Astroparticle Physics, Ooty, Dec 2010
38. Corfu Summer Institute: *Unification in the LHC Era*, Corfu, Sep 2011
39. Intern. School of Cosmic Ray Astrophysics: *A new era in particle astrophysics*, Erice, Jul 2012
40. 4th International Summer School on Astroparticle Physics, Nijmegen, Aug 2012
41. Nordic Winter School on Particle Physics and Cosmology, Gausdal, Jan 2013
42. International School for AstroParticle Physics (ISAPP) 2013, Djurönäset, Aug 2013

43. Corfu Summer School: *The Standard Model & Beyond*, Sep 2013
44. Corfu Summer School *The Standard Model & Beyond*, Sep 2014
45. ICTP Summer School on Particle Physics, Jun 2015
46. Taller de Altas Energias, Benasque, Sep 2016
47. Nordic Winter School on Particle Physics and Cosmology, Skeikampen, Jan 2017
48. GIAN School: *Dark Matter: The Astroparticle Connection*, New Delhi, Dec 2017
49. International School of Cosmic Ray Astrophysics, Erice, Aug 2018
50. Cracow School of Theoretical Physics, Zakopane, Jun 2019
51. Summer Research School: *Quantum to Cosmos: Ideas and Applications*, Gebze, Jul 2019
52. ICTP-AP Winter School on Theoretical Physics, Nov 2024

PhD/D.Phil Theses Supervised:

1. Kevin C. Benson, Wadham College, Oxford, 1991–93
   (Thesis: *'Aspects of the electroweak phase transition & baryogenesis'*)
2. Jennifer A. Adams, Magdalen College, Oxford, 1992–95
   (Thesis: *'Cosmological phase transitions: techniques & applications'*)
3. Sebastian E. Larsson, Christ Church College, Oxford, 1993–98
   (Thesis: *'Topological defects from cosmological phase transitions'*)
4. Michael Birkel, Linacre College, Oxford, 1994–97
   (Thesis: *'Astroparticle physics beyond the Standard Model'*)
5. Fermin Viniegra, Worcester College, Oxford, 1997–2001
   (Thesis: *'Reheating in inflationary cosmology'*) — with B Bassett
6. Mario Santos, Wadham College, Oxford, 1999–2003
   (Thesis: *'Primordial effects in the CMB'*) — with P Ferreira
7. David Skinner, Linacre College, Oxford, 1999–2003
   (Thesis: *'Cosmology of heterotic M-theory'*)
8. Paul Hunt, St John's College, Oxford, 2000–06
   (Thesis: *'The cosmological implications of inflation'*)
9. Andrew Taylor, Linacre College, Oxford, 2003–06
   (Thesis: *'The intergalactic propagation of ultrahigh energy cosmic rays'*)
10. Francesco Riva, Merton College, Oxford, 2004–08
    (Thesis: *'Cosmological consequences of supersymmetric flat directions'*) — with J March-Russell
11. Joao Rosa, Exeter College, 2006–10
    (Thesis: *'Aspects of Beyond the Standard Model String Phenomenology'*) — with J March-Russell
12. Shaun Hotchkiss, Balliol College, Oxford, 2006–10
    (Thesis: *'Inflation: beyond the scalar fluctuation power spectrum'*
13. Philipp Mertsch, Balliol College, Oxford, 2007–10
    (Thesis: *'Cosmic ray backgrounds for dark matter indirect detection'*)

14. Seshadri Nadathur, Merton College, Oxford, 2007–11
(Thesis: *'Inflation, large-scale structure & inhomogeneous cosmologies'*)

15. Felix Kahlhoefer, St Catherine's College, Oxford, 2011–14
(Thesis: *'Complementarity of searches for dark matter'*)

16. Kyle Allison, Balliol College, Oxford, 2010–14
(Thesis: *'The Standard Model to the Planck scale'*) — with G Ross

17. Jim Talbert, Hertford College, Oxford, 2012–16
(Thesis: *'From the LHC to IceCube, a melange of particle phenomenology'*) — with G Bell

18. David Kraljic, Balliol College, Oxford, 2012–16
(Thesis: *'Inhomogeneities in Cosmology'*)

19. Jeppe Trøst Nielsen, Niels Bohr Institute, Copenhagen, 2013–17
(Thesis: *'Testing cosmological models'*)

20. Amel Durakovic, Niels Bohr Institute, Copenhagen, 2014–18
(Thesis: *'On the likely structure & origin of primordial fluctuations'*)

21. George Johnson, St Cross College, Oxford, 2015–20
(Thesis: *'Modifications to the spectrum of radiation from black holes'*) — with J March-Russell

22. Augustinas Malinauskas, St Cross College, Oxford, 2016–20
(Thesis: *'Beyond the Standard Model Higgs sectors'*) — with U Haisch

23. Konstantin Beyer, Merton College, Oxford, 2017–21
(Thesis: *'Investigating New Physics with High Power Lasers'*) — with G Gregori

24. Giacomo Marocco, New College, Oxford, 2018–22 — with J Wheater
(Thesis: *'On the impact of new, light states in some astrophysical & laboratory systems'*)

25. Rudin Petrossian-Byrne, Balliol College, Oxford, 2017–23
(Thesis: *'Aspects of the Standard Model Landscape'*) — with J March-Russell

26. Ryan Barouki, Merton College, Oxford, 2021–
(working on astroparticle physics & 2D quantum gravity) — with J Wheater

Refereeing

Grant applications: Academy of Finland; Agence Nationale de la Recherche, France; Alexander von Humboldt Stiftung, Germany; Australian Research Council; Department of Atomic Energy, India; Department of Energy, USA; Department of Science & Technology, India; Deutsche Forshungsgemeinshaft, Germany; Engineering & Physical Sciences Research Council, UK; European Commission; European Research Council; European Space Agency; Fondazione Cariparo, Italy; Fundamenteel Onderzoek der Materie, Netherlands; International Centre for Theoretical Physics, Trieste; Istituto Nazionale di Fisica Nucleare, Italy; Leverhulme Foundation, UK; Ministero dell'Istruzione, Italy; Ministry of Education, Greece; National Research Foundation, South Africa; National Science Foundation, USA; Natural Sciences and Engineering Research Council, Canada; Nederlandse Organisatie voor Wetenschappelijk Onderzoek; Newton Institute, Cambridge; RANNIS Iceland; Royal Society of New Zealand; The Royal Society, UK; Science & Technology Facilities Council, UK; Swiss National Science Foundation; Tata Institute of Fundamental Research, Mumbai

Book proposals: Cambridge University Press, Oxford University Press

Journals: Astronomy & Astrophysics, Astrophysical Journal, Astroparticle Physics, Astrophysics & Space Science, Classical & Quantum Gravity, Computer Physics Communications, European Physical Journal C, Europhysics Letters, Journal of Cosmology & Astroparticle Physics, Journal of High Energy Physics, International Journal of Modern Physics A, Modern Physics Letters, Monthly Notices of the Royal Astronomical Society, Nature, Nuclear Physics B, Physics Letters B, Physical Review D, Physical Review Letters, Pramana, Reports on Progress in Physics, Science, SciPost Physics

Organisation of Conferences, Schools & Workshops:

▷ **Main Organiser:**
- UK Theoretical Cosmology Network meeting, Oxford, 15 May 1996, 26 Mar 1997, 20 May 1998
- EU Research & Training School: *Supersymmetry & the Early Universe*, Oxford, 26–29 Sep 2002
- IceCube collaboration meeting, Oxford, 21–24 Sep 2005
- ASPERA Workshop: *Theory and Astroparticle Physics*, Oxford, 17 Mar 2008
- EU Research & Training School: *Fundamental Physics & Cosmology*, Oxford, 22–26 Sep 2008
- First LINK Workshop: *Probing Physics beyond the SM with CTA*, Abingdon, 12 Nov 2010
- GrahamFest, Oxford, 30 Sep 2011
- IoP/IPPP Workshop: *New paths to particle dark matter*, Oxford, 29–30 Mar 2012
- NBIA PhD School: *Neutrinos underground and in the heavens*, Copenhagen, 23-27 Jun 2014
- 2$^{\rm nd}$ NBIA-APCTP Workshop: *Cosmology & Astroparticle Physics*, Copenhagen, 18-22 Aug 2012
- NBIA-Oxford Colloquium, Copenhagen, 13-15 Apr 2015
- NBIA PhD School: *Neutrinos underground and in the heavens II*, Copenhagen, 1-5 Aug 2016
- NBIA Workshop: *Self-interacting dark matter*, Copenhagen, 1-5 Aug 2017
- Royal Society Meeting: *Challenging the standard cosmological model*, London, 15-16 Apr 2024

▷ **Local Organising/Advisory Committee:**
- SUSY 98, Oxford, 11-17 Jul 1998
- Kogan Memorial Meeting: *From Fields to Strings*, Oxford, 8–10 Jan 2004
- First International Conference on String/M-theory Phenomenology, Oxford, 6–11 Jul 2002
- UK Neutrino Network meeting, Oxford, 29 Nov 2006
- Astroparticle Physics UK meeting, Oxford, 18–20 Jun 2008
- Rudolf Peierls Symposium on Theoretical Physics, Oxford, 5-6 Jul 2018
- British Univ. Summer School in Theoretical Elementary Particle Physics, Oxford, 20-31 Aug 2018
- *Higgs Couplings 2019*, Oxford, 30 Sep-4 Oct 2019

▷ **Organising Committee:**
- UK Institute for Theoretical High Energy Physics, Cambridge, 1–7 Sep 1991
- UK HEP Forum: *Cosmology after COBE*, Abingdon, 20–21 Jun 1992
- International Europhysics Conference on High Energy Physics, Brussels, 28 Jul–3 Aug 1995
- 28th International Conference on High Energy Physics, Warsaw, 25–31 Jul 1996
- UK HEP Forum: *New Horizons in Neutrino Physics*, Abingdon, 8–9 May 1999
- EU Network School: *The Early Universe*, CERN, 19–22 Apr 2001
- IPPP Workshop: *Phenomenology of Ultra-high-energy Cosmic Rays*, Durham, 21 June 2002
- UK HEP Forum: *The World according to WMAP*, Abingdon, 7–8 Jun 2003
- Astrophysics/Cosmology Session, SUSY'05, Durham, 18–23 Jul 2005
- Dalitz Memorial Meeting, Oxford, 3 Jun 2006
- EU Network School: *The Origin of the Universe*, Mytilene, 24–29 Sep 2007
- IoP/RAS meeting: *The Search for Dark Matter*, London, 26 Nov 2007
- International Workshop: *Cosmology with the CMB & LSS*, Pune, 18–31 Aug 2008
- PPAP Community Meeting: *Neutrino & Non-accelerator Physics*, Birmingham, 15 July 2009
- 9th Hellenic School of Elementary Particle Physics & Gravity, Corfu, 30 Aug–20 Sep 2009
- EU Network School: *Particle Physics & Cosmology*, Barcelona, 28 Sep–2 Oct 2009
- 10th Hellenic School of Elementary Particle Physics & Gravity, Corfu, 29 Aug–5 Sep 2010
- EU Network School: *Frontiers of Particle Cosmology*, Lecce, 13–18 Sep 2010
- ICATPP Conference: *Cosmic Rays for Particle and Astroparticle Physics*, Como, 7–8 Oct 2010
- Cherenkov Telescope Array Collaboration Meeting, Rutherford Lab, 8–11 Nov 2010
- Astroparticle Physics session: RAS National Astronomy Meeting, Llandudno, 17–21 Apr 2011
- ICTP Workshop: *Looking at the Neutrino Sky*, Trieste, 20-24 Jun 2011
- CERN Theory Institute: *Dark Matter Underground and in the Heavens*, Geneva, 18-29 Jul 2011
- 11th Hellenic School of Elementary Particle Physics & Gravity, Corfu, 4-18 Sep 2011
- XII Workshop on High Energy Physics Phenomenology, Mahabaleshwar, 2-8 Jan 2012
- 12th Hellenic School of Elementary Particle Physics & Gravity, Corfu, 8-27 Sep 2012

- Danish National Astronomy Meeting, Sandbjerg Estate, 18-19 Jun 2013
- 13th Hellenic School of Elementary Particle Physics & Gravity, Corfu, 31 Aug-27 Sep 2013
- 1st APCTP-NBIA joint workshop on Cosmology and Astroparticle Physics, Pohang, 21-25 Oct 2013
- 14th Hellenic School of Elementary Particle Physics & Gravity, Corfu, 3-21 Sep 2014
- *Dark Matter@LHC*, Oxford, 25-27 Sep 2014
- 15th Hellenic School of Elementary Particle Physics & Gravity, Corfu, 1-27 Sep 2015
- 16th Hellenic School of Elementary Particle Physics & Gravity, Corfu, 31 Aug-23 Sep 2016
- Nordic Winter School: *Cosmology and Particle Physics*, Skeikampen, 2-7 Jan 2017
- Corfu Summer Institute, Corfu, 2-28 Sep 2017
- Current themes in high energy physics & cosmology, Copenhagen, 13-17 Aug 2018
- Workshop on the Standard Model and Beyond, Corfu, 31 Aug-9 Sep 2018
- 36th International Cosmic Ray Conference, Madison, 24 Jul-1 Aug 2019
- International Workshop on Laboratory Astrophysics with Intense Lasers (on-line), 7-8 Dec 2020
- 37th International Cosmic Ray Conference (on-line), Berlin, 12-23 Jul 2021
- 21st International Symposium on Very High Energy Cosmic Ray Interactions, Ooty, 23-27 May 2022
- 38th International Cosmic Ray Conference, Nagoya, 26 Jul-3 Aug 2023
- 22nd Intern. Symp. on Very High Energy Cosmic Ray Interactions, Puerto Vallarta, 8-12 Jul 2024

▷ **International Scientific/Advisory Committee:**

- *Trends in Astroparticle Physics*, Stockholm, 22–25 Sep 1994
- *Beyond the Desert*, Castle Ringberg, 6–12 June 1999
- COSMO-01, Rovaniemi, 30 Aug–4 Sep 2001
- WIN'02, Canterbury, 21-26 Jan 2002
- COSMO-03, Ambleside, 24–30 Aug 2003
- *Quantum gravity phenomenology*, Ladek Zdroj, 4–14 Feb 2004
- 3rd International workshop on Ultra High Energy Cosmic Rays, Leeds, 22–24 Jul 2004
- WIN'05, Delphi, 6–11 Jun 2005
- WIN'07, Kolkata, 15–20 Jan 2007
- ICGC'07, Pune, 17–21 Dec 2007
- DISCRETE'08, Valencia, 11-16 Dec 2008
- *Radiation Matter Interaction Under Extreme Conditions*, Varanasi, 19–20 Dec 2008
- *Dark Matter in Astrophysics & Particle Physics*, Cambridge, 2–6 Aug 2010
- DISCRETE'10, Rome, 6–11 Dec 2010
- *Primordial Features and Non-Gaussianities*, Allahabad, 14–18 Dec 2010
- TAUP 2011, Munich, 5–9 Sep 2011
- Lepton-Photon Conference, Mumbai, 22–27 Aug 2011
- VLVnT11 – Very Large Volume Neutrino Telescopes, Erlangen, 12–14 Oct 2011
- WHEPP12: Workshop on High Energy Physics Phenomenology, Mahabaleshwar, 2–15 Jan 2012
- COSGRAV12: Modern Perspectives of Cosmology & Gravitation, Kolkata, 7–11 Feb 2012
- ICHEP2012: 36th International Conf. on High Energy Physics, Melbourne, 4–11 Jul, 2012
- *Darkattack2012*, Ascona, 15–20 Jul 2012
- TeVPA 2012, Mumbai, 11–15 Dec 2012
- 33$^{\rm rd}$ ICRC 2013, Rio de Janeiro, 2-9 Jul 2013
- TeVPA 2013, Irvine, 26–29 Aug 2013
- TeVPA 2014, Amsterdam, 23–28 Jun 2014
- Cosmo Cruise 2015, 2–9 Sep 2015
- VLVnT–2015: Very Large Volume Neutrino Telescopes, Rome, 2–16 Sep 2016
- TeVPA 2016, Geneva, 12–16 Sep 2016
- Winter School on AstroParticle Physics, Ootacamund, 21–29 Dec 2016
- DISCRETE 2016, Warsaw, 28 Nov–3 Dec 2016
- International Neutrino Summer School, Fermilab, 7-18 Aug 2017
- TeVPA 2017, Columbus, 7–11 Aug 2017
- International Neutrino Summer School, Mainz, 21 May–1 Jun 2018
- TeVPA 2018, Berlin, 27–31 Aug 2018

- Workshop on the Standard Model and Beyond, Corfu, 31 Aug-11 Sep 2019
- PPNT19, Uppsala, 7–9 Oct 2019
- TeVPA 2019, Sydney, 2–12 Dec 2019
- Workshop on the Standard Model and Beyond, Corfu, 29 Aug-8 Sep 2021
- XXVIII Epiphany Conference, Cracow, 10–14 Jan, 2022
- Workshop on the Standard Model and Beyond, Corfu, 28 Aug-8 Sep 2022
- Workshop on the Standard Model and Beyond, Corfu, 27 Aug-7 Sep 2023
- Workshop on the Standard Model and Beyond, Corfu, 25 Aug-4 Sep 2024
- Gamma 2024, Milan, 2-6 Sep 2024
- LHC Days in Split, Hvar, 30 Sep - 4 Oct 2024
- XXVI DAE-BRNS High Energy Physics Symposium, Varanasi, 19-23 Dec 2024

Participation in Experiments:

- *Big European Bubble Chamber* WA66 Beam Dump Collaboration (Data analysis 1985)
- *Pierre Auger Observatory* (Institutional Representative, 2003–13; Publications Committee)
- *IceCube* (Collaboration Board Member, 2004–; Editor, Yellow Book ; Publications Committee)
- *Cherenkov telescope Array* (Collaboration Member, 2010–; Requirements Review Committee; Co-editor of Special Issue; Review of Key Science Projects)
- *Laboratory Astroparticle Physics with High Powered Lasers* (Participant, 2016–)
- *Quantum Sensors for the Hidden Sector* (co-I, 2021–)

Research Grants:

1. SERC AF Starter Research Grant (*'Cosmological Probes of Physics Beyond the SM'*)
   PI, 1993–98 [GR/H90162] – £10,000
2. EU Third Framework Programme (*'Theoretical Astroparticle'* network)
   (Annecy + Barcelona, Copenhagen, Geneva, Gran Sasso, Munich, Oxford, Paris, Stockholm)
   UK Scientist-in-Charge, 1993–97 [CHRX-CT93-0120] — €57,140
3. EU 4th Framework Programme (*'Beyond the Standard Model'* TMR network)
   (Paris + Bonn, Geneva, Lisbon, Madrid, Oxford, Pisa, Thessaloniki, Trieste, Valencia)
   Co-I with G Ross (PI) *et al*, 1996–00 [FMRX-CT96-0090] — €132,000
4. British Council 'Acciones Integradas' Programme (*'Large-scale Structure'* network)
   (Barcelona, Cambridge, Durham, Oxford)
   Co-I with G Efstathiou (PI) *et al*, 1997–98 — £2,900
5. PPARC Rolling Grant (*'Theoretical Studies of Elementary Particles'*)
   Co-I with G Ross (PI) *et al*, 1999–03 [PPA/G/O/2000/00469]; — £360,692
6. PPARC Special Program Grant (*'Neutrino Mass'*)
   Co-I with G Ross (PI), 2000–02 [PPA/G/S/1998/00561] — £87,287
7. EU 5th Framework Programme (Marie Curie training site *'Particle Astrophysics'*)
   Co-I with J Binney and J Silk (PI), 2000–03 — €158,400
8. EU 5th Framework Programme (*'Physics Across the Present Energy Frontier'* TMR network)
   (Paris + Bonn, Geneva, Lisbon, Madrid, Oxford, Pisa, Thessaloniki, Trieste, Valencia)
   Co-I with G Ross (PI) *et al*, 2000–04 [HPRN-CT-2000-00148] — €145,000
9. EU 5th Framework Programme (*'Supersymmetry and the Early Universe'* TMR network)
   Network Coordinator, 2000–04 [HPRN-CT-2000-00152] — €1.49 M
10. Leverhulme Foundation Major Grant (*'Dark Matter'*)
    Co-I with J Binney and J Silk (PI), 2000–05 [F/08776A] — £433,134
11. EU Marie Curie fellowship (*'Cosmic Ray Probe of Physics beyond the SM'*)
    Scientist-in charge (awarded to R Toldra), 2000–02 [MCFI-1999-00465] — €107,072

12. Joint Research Equipment Initiative (*'Beowulf Supercomputer'*)
    Co-I with J Silk (PI) *et al*, 2000–05 — £127,151
13. EU Marie Curie fellowship (*'Non-Baryonic Dark Matter'*)
    Scientist-in charge (awarded to F Ferrer), 2001–03 [MCFI-2001-00645] — €107,072
14. PPARC Rolling Grant (*'Theoretical Studies of Elementary Particles'*)
    Co-I with G Ross (PI) *et al*, 2003–08 [PPA/G/O/2002/00479] — £562,204
15. PPARC Special Program Grant (*'Neutrino Physics'*)
    Co-I with G Ross (PI), 2004–06 [PPA/G/S/2003/00138] — £72,919
16. PPARC Research Grant (*'Operation of the Pierre Auger Observatory . . . '*)
    Co-applicant with A Watson (PI) *et al*, 2004–07 [PPA/G/S/2003/00073] — £475,495.68
17. PPARC Senior Fellowship (*'Auger & IceCube: Probes of the high energy universe'*)
    PI, 2006–09 [PPA/C506205/1] — £118,692
18. EU 6th Framework Programme Marie Curie RTN (*'The Origin of the Universe'*)
    Network Coordinator, 2006–10 [MRTN-CT-2006-035863] — €3.53 M
19. John Fell Fund *Strengthening Oxford-India Research Links in Theoretical Physical Sciences*)
    PI (with J. Cardy *et al*) 2006–12 — £25,313
20. STFC Research Grant (*UHE cosmic ray research with the Pierre Auger Observatory*)
    PI, 2008–11 [PPA/E007007/1] — £42,428
21. PPARC Rolling Grant (*'Theoretical Studies of Elementary Particles'*)
    Co-I with G Ross (PI) *et al*, 2008–11 [ST/G000492/1] — £1,900,748
22. UKIERI grant (*Interdisciplinary Oxford-India Research Network in Theoretical Physics*)
    Co-I (with J. Cardy *et al*), 2008–11 — £67,372
23. STFC Consolidated Grant (*'Theoretical Particle Physics Research'*)
    PI, 2011–14 [ST/J000507/1] — £989,201
24. IPPP Associateship (*'Phenomenology of Dark Matter'*)
    PI, 2011–12 — £4,000
25. DNRF Niels Bohr Professorship (*'Connecting Inner Space & Outer Space'*)
    PI, 2013–18 [506600-50-36547] — DKK 29,000,000
26. STFC Consolidated Grant (*'Theoretical Particle Physics Research'*)
    PI, 2014–17 [ST/L000474/1] — £1,107,542
27. STFC Grant (*'Parton Distributions with Electroweak corrections'*)
    co-PI (with J. Rojo), 2015–18 [ST/M003787/1] — £173,570
28. EPSRC grant (*'Particle acceleration in magnetised shocks'*)
    Co-I (with G. Gregori (PI) & A. Bell), 2016–19 [EP/N014472/1] — £566,043
29. SPARC (India-UK partnership in laboratory astro-particle physics)
    Co-I (with G. Gregori *et al*), 2016–20
30. STFC Consolidated Grant (*'Theoretical Studies of Elementary Particles'*)
    PI, 2017–20 [ST/P000770/1] — £721,571
31. STFC Consolidated Grant (*'Theoretical Studies of Particles & Strings'*)
    Co-I (with G. Salam *et al*), 2020–24 [ST/T000864/1] — £1,141,212
32. STFC Grant (*'Quantum Sensing for the Hidden Sector'*)
    Co-I (with P.J. Leek *et al*), 2021–24 [ST/T006277/1] — £838,605
33. EPSRC Grant (*'Probing the quantum vacuum with high power laser and 4th generation light sources'*)
    Co-I (with G. Gregori & I. Shipsey), 2023–26 [EP/X01133X/1] — £622,695

Participation in Networks:

▷ Scientist-in-Charge @ Oxford, EU network on *'Theoretical Astroparticle Physics'*, 1993–97
(Annecy + Barcelona, Copenhagen, Geneva, Gran Sasso, Munich, Oxford, Paris, Stockholm)

▷ Member, Oxford node of EU network on *'Beyond the Standard Model'*, 1996–00
(Paris + Bonn, Geneva, Lisbon, Madrid, Oxford, Pisa, Thessaloniki, Trieste, Valencia)

▷ Co-ordinator, EU network on *'Supersymmetry and the Early Universe'*, 2000–04
(Oxford/Lancaster/King's College + Bonn, Geneva, Helsinki, Ioannina/Thessaloniki, Madrid/Barcelona/Granada, Orsay/Annecy/Marseilles, Trieste, Warsaw)

▷ Member, Oxford node of European Network of Theoretical Astroparticle Physics, 2004–

▷ Member, UK Neutrino Network, 2004–

▷ Member, Oxford node of EU network on *'Quest for Unification'*, 2004–08
(Paris + Salonicki, Lisbon, Madrid, Bonn, Oxford, Pisa, Trieste, Valencia, Geneva)

▷ Co-ordinator, EU network on *'Origin of the Universe'*, 2006–10
(Oxford + Lancaster, King's College London, Annecy, Barcelona, Bonn, Copenhagen, Geneva, Helsinki, Ioannina, Munich, Padova, Paris, Seoul, Warsaw)

▷ Co-ordinator, Oxford-India network on Theoretical Physical Sciences, 2006–12

▷ Oxford representative, UK-India Education & Research Initiative Network on *'Neutrino & the Fundamental Laws of Nature'*, 2007–10

▷ Member, UKIERI Network on *'Theoretical Physical Sciences'*, 2008–11

▷ Member, Oxford node of EU network on *'Unification in the LHC era'*, 2009–13
(Paris + Salonicki, Lisbon, Madrid, Bonn, Oxford, Pisa, Trieste, Valencia, Geneva)

▷ Associate Member, DFG Research Training Group on *'Models of Gravity'*, 2013–21

External Appointments:

▷ Maxwell Visiting Fellow, King's College, London, 2000–05

▷ Adjunct Professor, Tata Institute of Fundamental Research, Mumbai, 2006–09

▷ Adjunct Professor, Saha Institute of Nuclear Physics, Kolkata, 2008–13

▷ Scientific Associate, Discovery Center, Niels Bohr Institute, Copenhagen, 2010–20

▷ Scientific Associate, Institute of Particle Physics Phenomenology, Durham, 2011–12

▷ Niels Bohr Professor, Niels Bohr International Academy, Copenhagen, 2013–18

▷ Affiliate Professor, Niels Bohr Institute, Copenhagen, 2018–23

▷ Adjunct Professor, Raman Research Institute, Bangalore, 2019–22

Public Understanding of Science

I worked (1988-89) with Eklavya, a NGO in Bhopal concerned with science teaching & outreach. My main task was to launch a monthly newsletter on science & technology (*Srote*) for regional vernacular newspapers.We set up the supporting library and publishing facility and wrote a number of articles for the newsletter.

I have engaged in the following science outreach activities in the UK:

▷ Oxford Physics: Publicity Committee (1995–96); Participation in Open Days; Science, Engineering & Technology Weeks; Assessment Panel, Undergraduate Speaking Competition (2001–04)

▷ Continuing Education, Oxford: Summer School: *'Blowing up the universe'*, 15–22 Jul 1995; School: *'Cosmic antimatter'*, 23 Jan 1999; Summer School: *'Constructing the Universe'*, 24–31 Jul 1999

▷ Consultant to BBC science programme makers on several occasions

▷ Radio interviews, e.g. BBC Thames Valley, 12 Jan 2000, LBC, London, 27 Apr 2000

▷ Assisted the Royal Institution, London to organise topical exhibition

▷ Filmed interview for new Space Galleries at Royal Greenwich Observatory (Dec 2007)

▷ Debate: *The fate of the universe: Does dark energy exist?*, Imperial College, London, 21 July 2009

• Debates & discussions: *How the Light Gets in*, Hay-on-Wye, 24-27 May 2019

▷ Popular level talks:

• *'Why do science?'*, Kingsway Camden's College, London, 10 May 1993

• *'A magical mystery tour of the universe'*
- St Phillip & James Primary School, Oxford, 9 Oct 1997
- St Barnabas Primary School, Oxford, 14 Jun 2004

• *'Why is the sky dark at night?'*
- SET'95 Public Lecture, Oxford, 17 Mar 1995
- Cherwell School, Oxford, 26 Mar 1996
- SET'97 'Frontier Physics for Teachers', Cosener's House, Abingdon, 15 Mar 1997
- Oxford Space & Astronomical Society, Oxford, 9 Feb 1998

• *'Seeing the edge of the universe'*
- Linacre College Seminar, Oxford, 12 Oct 1999
- 'Oxford Festival of Science' Programme, Peers School, Oxford, 26 Jan 2000
- Charterhouse School, Godalming, 6 Mar 2001
- IOP Lecture, Shrewsbury School, 28 Sep 2001
- New College 'Discovery Evening', Oxford, 15 Nov 2001
- St Edward's School, Oxford, 13 Mar 2002
- Taunton School, 10 May 2002
- Georgia Tech Summer School, Oxford, 17 Jul 2002
- Linacre Lecture at King's School, Canterbury, 18 Sep 2003
- National AimHigher Masterclass for Sixth Form students, Oxford, 6 Dec 2004
- Jadavpur University, Kolkata, 5 Jan 2005
- British Council, Kolkata, 7 Jan 2005
- Dudley Residential Masterclass, Oxford, 21 Mar 2005
- Open Day talk, Department of Physics, Oxford, 30 Jun 2005
- Headington School, Oxford, 28 Nov 2005
- Admissions talk, Department of Physics, Oxford, 13 Dec 2005
- AVM School Bandra, Mumbai, 20 Dec 2006
- Cherwell School, Oxford, 17 Jan 2007
- InfoSys lecture, Homi Bhabha Centre for Science Education, Mumbai, 22 Dec 2008
- International Year of Astronomy lecture, Green Templeton College, Oxford, 3 Mar 2009
- Chipping Norton Amateur Astronomical Society, 21 Mar 2011
- Folkeuniversitet i København, 5 & 7 Dec 2017
- Jawaharlal Nehru University, New Delhi, 19 Dec 2017
- Manthan, Hyderabad, 3 Sep 2019
- National Science Day public lecture, Ootacamund, 28 Feb 2023

• *'The road to quantum gravity'*
- 'Frontier Physics for Teachers' Workshop, Cosener's House, Abingdon, 4 Mar 2000
- 'Oxford Access Scheme' Summer School, Dept of Physics, Oxford, 23 Aug 2000
- Georgia Tech Summer School, Oxford, 9 Jul 2001
- IOP 'Young Physicist's Conference', Dept of Physics, Oxford, 25 Nov 2001
- Linacre Seminar, Oxford, 12 Feb 2002
- A K Raychoudhury Symposium, Scottish Church College, Kolkata, 5 Jan 2005
- Oxford University Physics Society, 26 Apr 2012

• *'Discovering brane-world'*
- Meeting of Heads of Physics, Rugby Group, Cheltenham College, 24 Feb 2001
- 'Oxford Access Scheme' Summer School, Dept of Physics, Oxford, 22 Aug 2001

- *'Cosmology in wonderland'*, IOP 'Physics Update' Meeting, Oxford, 10 Dec 2004
- *'Dark matter vs. modified gravity'*
  - Oxford Space & Astronomical Society, 1 Nov 2010
  - Oxford Undergraduate Student Conference, St Catherine's College, 16 Apr 2013
- *'Darkness visible: the search for the missing mass of the universe'*
  - Public talk at Lepton Photon 2011, TIFR, Mumbai, 27 Aug 2011
  - Larsen & Toubro *"GuruSpeak"* Forum, Mumbai, 30 Aug 2011
  - Cambridge University Scientific Society, 11 Oct 2011
  - Folkeuniversitetet, NBI, Copenhagen, 8 Dec 2014
- *'Should scientists be activists?'*, Centre for Society & Policy, Bangalore, 13 Sep 2019

▷ Articles & letters in scientific/academic magazines:
- *'Lifetime significance'*, Physics World, 1987
- *'Shadow of a star: the neutrino story of Supernova 1987a'*, THES, Sep 1997 (book review)

My papers are classified as those with a short author list, followed by those with experimental collaborations: CERN-WA-066, Pierre Auger Observatory, IceCube Neutrino Observatory, Cherenkov Telescope Array, & laser plasma physics experiments. Publications with the Particle Data Group & reports are listed separately, as are conference submissions. Note that in (astro)particle physics the author list is always *alphabetical*.

Short authorlist papers

[1] *Properties of low energy ions observed in the SKYLAB cosmic ray experiment*
Indian Journal of Radio & Space Physics 6 (1977) 209–212
(with S. Biswas, N. Durgaprasad & V.S. Venkatavaradan)

[2] *Charge states of low energy cosmic rays in the SKYLAB experiment*
Indian Journal of Radio & Space Physics 8 (1979) 222–225
(with S. Biswas, N. Durgaprasad & V.S. Venkatavaradan)

[3] *Detection of relativistic iron nuclei in the plastic track detector CR-39*
Nuclear Instruments & Methods 163 (1979) 183–187
(with S. Biswas, N. Durgaprasad, P.J. Kajarekar & V.S. Venkatavaradan)

[4] *A lower limit to the magnetic Field in Cassiopeia-A*
Monthly Notices of the Royal Astronomical Society 191 (1980) 855–861
(with R. Cowsik)

[5] *Does the galactic synchrotron background originate in old supernova remnants?*
Monthly Notices of the Royal Astronomical Society 199 (1982) 97–108

[6] *The evolution of supernova remnants as radio sources* ⋆ ADS[1]: 50+ cites
Monthly Notices of the Royal Astronomical Society 207 (1984) 745–775; erratum 209, 719
(with R. Cowsik)

[7] *Astrophysical consequences of $n - \bar{n}$ oscillations*
Nature 309 (1984) 727

[8] *Cosmological & experimental constraints on the tau neutrino* ⋆ InSPIRE[2]: topcite 100+
Physics Letters 148B (1984) 347–354
(with A.M. Cooper)

Philosophical Transactions A, Volume 383 (2025) 20240036
(with J. Binney, R. Mohayaee & J. Peacock)

With the CERN-WA-066 Collaboration:

[148] *Bounds on light gluinos from the BEBC beam dump experiment*
Physics Letters 160B (1985) 212–216
(with A.M. Cooper & M.A. Parker + WA66 collaboration)

[149] *Search for heavy neutrino decays in the BEBC beam dump experiment* TOPCITE 100+
Physics Letters 160B (1985) 207–211
(with A.M. Cooper, S.J. Haywood & M.A. Parker + WA66 collaboration)

With the Pierre Auger Observatory collaboration:

[150] *An upper limit to the photon fraction in cosmic rays above 10^{19} eV from the Pierre Auger Observatory* Astroparticle Physics 27 (2007) 155–168 [astro-ph/0606619] TOPCITE 100+

[151] *Anisotropy studies around the galactic centre at EeV energies with the Pierre Auger Observatory*
Astroparticle Physics 27 (2007) 244–253 [astro-ph/0607382] TOPCITE 50+

[152] *Correlation of the highest-energy cosmic rays with nearby extragalactic objects* TOPCITE 500+
Science 318 (2007) 938–943 [arXiv:0711.2256]

[153] *Upper limit on the cosmic ray γ flux above 10^{19} eV using the surface detector of the Pierre Auger observatory* Astroparticle Physics 29 (2008) 243–256 [arXiv:0712.1147] TOPCITE 250+

[154] *Upper limit on the diffuse flux of UHE tau neutrinos from the Pierre Auger Observatory*
Physical Review Letters 100 (2008) 211101 [arXiv:0712.1909] TOPCITE 100+

[155] *Correlation of the highest-energy cosmic rays with the positions of nearby active galactic nuclei*
Astroparticle Physics 29 (2008) 188–204; erratum 30 (2008) 45 [arXiv:0712.2843] TOPCITE 500+

[156] *Observation of the suppression of the flux of cosmic rays above 4×10^{19} eV* TOPCITE 500+
Physical Review Letters 101 (2008) 061101 [arXiv:0806.4302]

[157] *Upper limit on the cosmic-ray photon fraction at EeV energies from the Pierre Auger Observatory*
Astroparticle Physics 31 (2009) 399–406 [arXiv:0903.1127] TOPCITE 100+

[158] *Limit on the diffuse flux of UHE tau neutrinos with the surface detector of the Pierre Auger Observatory* Physical Review D79 (2009) 102001 [arXiv:0903.3385] TOPCITE 100+

[159] *Atmospheric effects on extensive air showers observed with the surface detector of the Pierre Auger observatory* Astroparticle Physics 32 (2009) 89, erratum 33, 65 [arXiv:0906.5497] TOPCITE 50+

[160] *Search for muon neutrinos from gamma-ray bursts with the IceCube neutrino telescope*
Astrophysical Journal 710 (2010) 346–359 [arXiv:0907.2227] TOPCITE 100+

[161] *The fluorescence detector of the Pierre Auger Observatory* TOPCITE 250+
Nuclear Instruments & Methods A620 (2010) 227–251 [arXiv:0907.4282]

[162] *A study of the effect of molecular and aerosol conditions in the atmosphere on air fluorescence measurements at the Pierre Auger Observatory*
Astroparticle Physics 33 (2010) 108–129 [arXiv:1002.0366] TOPCITE 100+

[163] *Measurement of the depth of maximum of extensive air showers above 10^{18} eV* TOPCITE 500+
Physical Review Letters 104 (2010) 091101 [arXiv:1002.0699]

[164] *Measurement of the energy spectrum of cosmic rays above 10^{18} eV using the Pierre Auger Observatory* Physics Letters B685 (2010) 239–246 [arXiv:1002.1975] TOPCITE 500+

[165] *Update on the correlation of the highest energy cosmic rays with nearby extragalactic matter*
Astroparticle Physics 34 (2010) 314–326 [arXiv:1009.1855] TOPCITE 250+

[166] *The northern site of the Pierre Auger Observatory* New Journal of Physics 12 (2010) 035001

[167] *The exposure of the hybrid detector of the Pierre Auger Observatory* TOPCITE 100+
Astroparticle Physics 34 (2011) 368–381 [arXiv:1010.6162]

[168] *Advanced functionality for radio analysis in the offline software framework of the PAO*
Nuclear Instruments & Methods A635 (2011) 92–102 [arXiv:1101.4473] TOPCITE 100+

[169] *The Pierre Auger Observatory scaler mode for the study of solar activity modulation of galactic cosmic rays* Journal of Instrumentation 6 (2011) P01003

[170] *Search for first harmonic modulation in the RA distribution of cosmic rays detected at the Pierre Auger Observatory* Astroparticle Physics 34 (2011) 627–639 [arXiv:1103.2721] TOPCITE 100+

[171] *Anisotropy and chemical composition of ultra-high energy cosmic rays using arrival directions measured by the Pierre Auger Observatory*
Journal of Cosmology & Astroparticle Physics 06 (2011) 022 [arXiv:1106.3048]

[172] *The lateral trigger probability function for the ultra-high energy cosmic ray showers detected by the Pierre Auger Observatory* Astroparticle Physics 35 (2011) 266–276 [arXiv:1111.6645]

[173] *Trigger and aperture of the surface detector array of the Pierre Auger Observatory*
Nuclear Instruments & Methods A 613 (2010) 29 [arXiv:1111.6764] TOPCITE 250+

[174] *The effect of the geomagnetic field on cosmic ray energy estimates and large scale anisotropy searches on data from the Pierre Auger Observatory*
Journal of Cosmology & Astroparticle Physics 11 (2011) 022 [arXiv:1111.7122]

[175] *Search for signatures of magnetically-induced alignment in the arrival directions measured by the Pierre Auger Observatory* Astroparticle Physics 35 (2012) 354–361 [arXiv:1111.2472]

[176] *Description of atmospheric conditions at the Pierre Auger Observatory using the Global Data Assimilation System* Astroparticle Physics 35 (2012) 591–597 [arXiv:1201.2276] TOPCITE 100+

[177] *Search for ultrahigh energy neutrinos in highly inclined events at the Pierre Auger Observatory*
Physical review D 84 (2011) 122005, D85 (2012) 029902 [arXiv:1202.1493] TOPCITE 100+

[178] *Measurement of the proton-air cross-section at sqrt(s) = 57 TeV with the Pierre Auger Observatory*
Physical Review Letters 109 (2012) 062002 [arXiv:1208.1520] TOPCITE 250+

[179] *The rapid atmospheric monitoring system of the Pierre Auger Observatory*
Journal of Instrumentation 7 (2012) P09001 [arXiv:1208.1675]

[180] *Antennas for the detection of radio emission pulses from cosmic-ray* TOPCITE 50+
Journal of Instrumentation 7 (2012) P10011 [arXiv:1209.3840]

[181] *Search for point-like sources of ultra-high energy neutrinos at the Pierre Auger Observatory and improved limit on the diffuse flux of tau neutrinos* TOPCITE 50+
Astrophysical Journal 755 (2012) L4 [arXiv:1210.3143]

[182] *A search for anisotropy in the arrival directions of ultra high energy cosmic rays recorded at the Pierre Auger Observatory*
Journal of Cosmology & Astroparticle Physics 1204 (2012) 040 [arXiv:1210.3602]

[183] *Large scale distribution of arrival directions of cosmic rays detected above 10^{18} eV at the Pierre Auger Observatory* TOPCITE 50+
Astrophysical Journal Supplement 203 (2012) 34 [arXiv:1210.3736]

[184] *Results of a self-triggered prototype system for radio-detection of extensive air showers at the Pierre Auger Observatory* Journal of Instrumentation 7 (2012) P11023 [arXiv:1211.0572]

[185] *A search for point sources of EeV neutrons*
Astrophysical Journal 760 (2012) 148 [arXiv:1211.4901] TOPCITE 50+

[186] *Constraints on the origin of cosmic rays above 10^{18} eV from large scale anisotropy searches at the Pierre Auger Observatory* TOPCITE 100+
Astrophysical Journal 762 (2012) L13 [arXiv:1212.3083]

[187] *Ultrahigh energy neutrinos at the Pierre Auger Observatory* TOPCITE 50+
Advances in High Energy Physics 2013 (2013) 708680 [arXiv:1304.1630]

[188] *Bounds on the density of sources of UHE cosmic rays from the Pierre Auger Observatory*
Journal of Cosmology & Astroparticle Physics 05 (2013) 009 [arXiv:1305.1576] TOPCITE 50+

With the IceCube Neutrino Observatory Collaboration:

[189] *First year performance of the IceCube neutrino telescope* TOPCITE 500+
Astroparticle Physics 26 (2006) 155–173 [astro-ph/0604450]

[190] *Limits on the high-energy gamma and neutrino fluxes from the SGR 1806-20 giant flare of December 27th, 2004 with the AMANDA-II detector*
Physical Review Letters 97 (2006) 221101 [astro-ph/0607233]

[191] *Five years of searches for point sources of astrophysical neutrinos with the AMANDA-II neutrino telescope* Physical Review D75 (2007) 102001 [astro-ph/0611063] TOPCITE 100+

[192] *Search for neutrino-induced cascades from gamma-ray bursts with AMANDA* TOPCITE 50+
Astrophysical Journal 664 (2007) 397–410 [astro-ph/0702265]

[193] *The search for muon neutrinos from northern hemisphere γ-ray bursts with AMANDA*
Astrophysical Journal 674 (2007) 357–370 [arXiv:0705.1186] TOPCITE 50+

[194] *Multi-year search for a diffuse flux of muon neutrinos with AMANDA-II* TOPCITE 100+
Physical Review D76 (2007) 042008, Erratum D 77, 089904 [arXiv:0705.1315]

[195] *Detection of atmospheric muon neutrinos with the IceCube 9-string detector*
Physical Review D76 (2007) 027101 [arXiv:0705.1781]

[196] *Search for ultra high-energy neutrinos with AMANDA-II* TOPCITE 100+
Astrophysical Journal 675 (2008) 1014–1024 [arXiv:0711.3022]

[197] *Search for point sources of high energy neutrinos with final data from AMANDA-II*
Physical Review D79 (2009) 062001 [arXiv:0809.1646] TOPCITE 100+

[198] *Solar energetic particle spectrum on 2006 December 13 determined by IceTop*
Astrophysical Journal 689 (2008) L65–L68 [arXiv:0810.2034]

[199] *The IceCube data acquisition system: signal capture, digitization, and time stamping*
Nuclear Instruments & Methods A601 (2009) 294–316 [arXiv:0810.4930] TOPCITE 500+

[200] *Search for high-energy muon neutrinos from the "naked-eye" GRB 080319B with the IceCube neutrino telescope* Astrophysical Journal 701 (2009) 1721; erratum 708, 911 [arXiv:0902.0131]

[201] *Determination of the atmospheric neutrino flux and searches for new physics with AMANDA-II*
Physical Review D 79 (2009) 102005 [arXiv:0902.0675] TOPCITE 100+

[202] *Limits on a muon flux from neutralino annihilations in the Sun with the IceCube 22-string detector* Physical Review Letters 102 (2009) 201302 [arXiv:0902.2460] TOPCITE 100+

[203] *First neutrino point-source results from the 22-String IceCube detector* TOPCITE 50+
Astrophysical Journal 701 (2009) L47–L51 [arXiv:0905.2253]

[204] *Measurement of sound speed vs. depth in South Pole ice for neutrino astronomy*
Astroparticle Physics 33 (2010) 277–286 [arXiv:0909.2629]

[205] *Limits on a muon flux from Kaluza-Klein dark matter annihilations in the Sun from the IceCube 22-string detector* Physical Review D81 (2010) 057101 [arXiv:0910.4480]

[206] *Extending the search for neutrino point sources with IceCube above the horizon* TOPCITE 50+
Physical Review Letters 103 (2009) 221102 [arXiv:0911.2338]

[207] *Calibration and characterization of the IceCube photomultiplier tube* TOPCITE 250+
Nuclear Instruments & Methods A618 (2010) 139–152 [arXiv:1002.2442]

[208] *Measurement of acoustic attenuation in South Pole ice*
Astroparticle Physics 34 (2011) 382–393 [arXiv:1004.1694]

[209] *The energy spectrum of atmospheric neutrinos between 2 and 200 TeV with the AMANDA-II detector*
Astroparticle Physics 34 (2010) 48–58 [arXiv:1004.2357] TOPCITE 100+

[210] *Measurement of the anisotropy of cosmic ray arrival directions with IceCube* TOPCITE 100+
Astrophysics Journal 718 (2010) L194–L198 [arXiv:1005.2960]

[211] *The first search for extremely-high energy cosmogenic neutrinos with the IceCube Neutrino Observatory* Physical Review D82 (2010) 072003 [arXiv:1009.1442] TOPCITE 50+

[212] *Search for a Lorentz-violating sidereal signal with atmospheric neutrinos in IceCube*
Physical Review D 82 (2010) 112003 [arXiv:1010.4096] TOPCITE 100+

[213] *Search for relativistic magnetic monopoles with the AMANDA-II neutrino telescope*
European Physical Journal C69 (2010) 361–378

[214] *Measurement of the atmospheric neutrino energy spectrum from 100 GeV to 400 TeV with IceCube*
Physical Review D83 (2011) 012001 [arXiv:1010.3980] TOPCITE 250+

[215] *Time-integrated searches for point-like sources of neutrinos with the 40-string IceCube detector*
Astrophysical Journal 732 (2011) 18 [arXiv:1012.2137] TOPCITE 100+

[216] *Limits on neutrino emission from gamma-ray bursts with the 40 string IceCube detector*

[482] *IceCube-Gen2: The window to the extreme universe* TOPCITE 500+
Journal of Physics G48 (2021) 060501 [arXiv:2008.04323]

[483] *AMS-100: The Next Generation Magnetic Spectrometer in Space* ESA Voyage 2050 White Paper
(With S. Schael *et al.*)

[484] *The Forward Physics Facility at the High-Luminosity LHC* TOPCITE 250+
Journal of Physics G50 (2023) 030501 [arXiv:2203.05090]
(with J. Feng *et al.*)

Conference submissions:

[485] Energy spectra & charge states of low energy cosmic rays in the SKYLAB experiment
Space Research XX (1980) 259–262 (with S. Biswas, N. Durgaprasad & V.S. Venkatavaradan)

[486] Gamma ray emission from supernova remnants
in 'Non-Solar Gamma Rays', ed. M. Rycroft (Pergamon Press, 1980), p.57–60 (with R. Cowsik)

[487] The evolution of supernova remnants as radio sources
Proc. IAU Symp. 101: 'Supernova remnants & their X-ray emission', Venice, ed. J. Danziger & P. Gorenstein, (Reidel, 1983), p.187–192 (with R. Cowsik)

[488] Neutrino detectors as probes of massive cosmological relics
Proc. 2nd Intern. Workshop on 'Theoretical & Phenomenological Aspects of Underground Physics', eds. A. Morales *et al*, Nuclear Physics B (Proc. Suppl.) 28A (1992) 405–408

[489] Successful supersymmetric inflation
Proc. International EPS Conf. on High Energy Physics, Brussels, ed. J. Lemonne *et al* (World Scientific, 1996), p.95–98 [hep-ph/9510369]

[490] The cosmic ray energy spectrum & related measurements with the Pierre Auger Observatory
Submissions to the 31st ICRC, Lodz (2009) [arXiv:0906.2189] TOPCITE 50+

[491] Studies of cosmic ray composition & air shower structure with the Pierre Auger Observatory
Submissions to the 31st ICRC, Lodz (2009) [arXiv:0906.2319] TOPCITE 50+

[492] Astrophysical sources of cosmic rays & related measurements with the Pierre Auger Observatory
Submissions to the 31st ICRC, Lodz (2009) [arXiv:0906.2347] TOPCITE 50+

[493] Light asymmetric dark matter
Proc. 6th Patras Workshop on Axions, WIMPs & WISPs, Zurich, 5–9 Jul 2010, eds. J. Jaeckel *et al* (with M. T. Frandsen)

[494] The Pierre Auger Observatory I: The cosmic ray energy spectrum & related measurements
Contribution to the 32nd ICRC, Beijing (2011) [arXiv:1107.4809] TOPCITE 100+

[495] The Pierre Auger Observatory II: Studies of cosmic ray composition & hadronic interactions
Contribution to the 32nd ICRC, Beijing (2011) [arXiv:1107.4804] TOPCITE 100+

[496] The Pierre Auger Observatory III: Other astrophysical observations TOPCITE 50+
Contribution to the 32nd ICRC, Beijing (2011) [arXiv:1107.4805]

[497] The Pierre Auger Observatory V: Enhancements TOPCITE 100+
Contribution to the 32nd ICRC, Beijing (2011) [arXiv:1107.4807]

[498] The 'PAMELA anomaly' indicates a nearby cosmic ray accelerator
Proc. 12th ICATPP, Como (World Scientific, 2011) 535–543 [arXiv:1108.1753] (with P. Mertsch)

[499] 2nd-order Fermi acceleration as the origin of the Fermi bubbles
Nuclear Instruments and Methods in Physics Research A, 692 (2012) 265–268 [arXiv:1108.1754]

[500] Quantifying uncertainties in the high energy neutrino cross-section
Pramana 79 (2012) 1301–1308 [arXiv:1108.1755] (with A.M. Cooper-Sarkar & P. Mertsch)

[501] The angular power spectrum of the Galactic synchrotron background
Proc. 33rd ICRC, Rio de Janeiro (2013) (with P. Mertsch)

[502] A hadronic explanation of the lepton anomaly Journal of Physics, Conf. Series 531 (2014) 012008

[503] Combined analysis of cosmic-ray anisotropy with IceCube and HAWC
Submissions to the 35th ICRC, Busan (2017) [arXiv:1708.03005]

[504] CTA contributions to the 35th International Cosmic Ray Conference
Submissions to the 35th ICRC, Busan (2017) [arXiv:1709.03483]

[505] The IceCube Neutrino Observatory Part I: Searches for the sources of astrophysical neutrinos
Submissions to the 35th ICRC, Busan (2017) [arXiv:1710.01179]

[506] The IceCube Neutrino Observatory Part II: the atmospheric and astrophysical neutrino flux
Submissions to the 35th ICRC, Busan (2017) [arXiv:1710.01191] TOPCITE 100+

[507] The IceCube Neutrino Observatory Part III: Cosmic rays
Submissions to the 35th ICRC, Busan (2017) [arXiv:1710.01194]

[508] The IceCube Neutrino Observatory Part IV: Searches for beyond the Standard Model physics
Submissions to the 35th ICRC, Busan (2017) [arXiv:1710.01197]

[509] The IceCube Neutrino Observatory Part V: Solar flares, Supernovae, Event reconstruction, ...
Submissions to the 35th ICRC, Busan (2017) [arXiv:1710.01201]

[510] The IceCube Neutrino Observatory Part VI: IceCube-Gen2
Submissions to the 35th ICRC, Busan (2017) [arXiv:1710.01207]

[511] The IceCube Neutrino Observatory – Contributions to the 36$^{\rm th}$ International Cosmic Ray Conference (ICRC2019) PoS-ICRC2019 [arXiv:1907.11699]

[512] Cherenkov Telescope Array (CTA) Contributions to the 36$^{\rm th}$ International Cosmic Ray Conference (ICRC2019) PoS-ICRC2019 [arXiv:1911.12077]
